In cases of GHB chronic abuse, the observed concentrations ranged from 9.2 to 229.1ng/mg, when physiological GHB concentrations in head hair were in the range 0.2 to 12 ng/mg, with prevalence for those between 0.5 to 5ng/mg.

For Anthony WALGATE, GHB concentrations were higher than the physiological reported levels. Findings were in favour of regular GHB abuse during the time period covered by the hair test (approx. 4 months period before death).

For DJW/124 (Jack TAYLOR)

The hair sample was analysed using LC-MS/MS on a 2 x 1cm sections following 1 x 2cm section for the previously listed drugs (pages 13 and 14).

The decontamination washes were also analysed.

The results are as follows:
